

This page enables processors to report the movement of pigs onto the abattoir's PIC to the PigPass database. Please note that it is a mandatory requirement for NSW abattoirs to upload a copy of the movement document to the PigPass database.

New Processor Movement Reporting Screen:

The screenshot shows the 'Processor Movement Reporting NSW' web interface. At the top, there is a breadcrumb trail: 'Home > Processor Movement Reporting NSW'. Below this, a descriptive paragraph states: 'This page enables processors to report slaughters to the PigPass database. Processors report details of pigs slaughtered at the consignment level by entering information on the PigPass NVDs arriving at the establishment.' A prominent 'Warning' box follows, explaining the legal responsibility of saleyards and advising that abattoirs should not report movements from directly saleyards. Below the warning, a link for 'Download Instructions' is provided. The main form contains several fields: 'Serial No*' with a text input field; 'Source PIC*' with a dropdown menu; 'No of Stock*' with a numeric input field; 'Time on Source PIC*' with a dropdown menu; 'Slaughter Date*' with a date picker; and 'PPNVD Document*' with a file upload button. A note at the bottom of the form specifies: 'You can only upload JPG files and Maximum allowed file size is 1 MB.' A 'Submit' button is located at the bottom right of the form.

Step 1: Enter the serial number.

- The system will verify whether 'Serial No' is valid or not.
- **Valid:** System will populate Source PIC with respect to 'Serial No'. Please refer the screen shot below.

Processor Movement Reporting

Home > Processor Movement Reporting NSW

Example Abattoir

This page enables processors to report slaughters to the PigPass database. Processors report details of pigs slaughtered at the consignment level by entering information on the PigPass NVDs arriving at the establishment.

Warning

It is the legal responsibility of saleyards to report the forward movement of pigs (this is the only movement where this occurs). As pigs sold at a saleyard from one PigPass NVD can be split into several receivers, PigPass is designed to allow this split movement and that this can only be undertaken by the saleyard. **Abattoirs should not report the movement of any pigs received from directly saleyards.** If you do, the PigPass NVD is effectively "closed" and the saleyard and other receivers cannot report the remainder of the movements.
