JEV Surveillance Updates

Results: Week 48, 2025

APL continues to monitor national surveillance activities for Japanese Encephalitis Virus (JEV).

Latest Results:

- No confirmed clinical cases of JEV reported nationally in humans or animals.
- Victoria: <u>Detection</u> in a piggery effluent sample. <u>Detection</u> in mosquitoes in <u>Horsham</u>.

We encourage producers to put mosquito control measures in place now. Guidance is available in the <u>Integrated Mosquito Management Principles for Piggeries</u>. Vaccination against JEV is also recommended for all people working at, residing at or providing services to pig farm and abattoir enterprises.
